Service Bulletin

Amateur Radio

To: Icom authorized distributors

Model : IC-7300 All versions

Subject: IC-7300 Firmware Update Ver.1.12

Explanation:

Ver.1.12 of the IC-7300 firmware was uploaded to our global site for downloading on April 14, 2016.

(http://www.icom.co.jp/world/support/download/firm/)

Before you install the firmware, download the installation guide using the link on the firmware update page, or from the site support webpage, also after April 14, 2016.

IC-7300's improvements

•Audio processing improvement in SSB mode transmission
•Minor graphic update

To update the firmware

•An SD card or an SDHC card is required.
• Format the card in the IC-7300 before using it for the update. (First, save any data that is on the card, if necessary.)

• Unzip and save the downloaded firmware file in "IC-7300" folder that is on the card.

• Save the transceiver's data onto a separate card before doing the Update, as it is possible that your data could get lost or corrupted during the update. Thoroughly read Section 8 (USING AN SD CARD) of the "FULL MANUAL" for details.

• Thoroughly read Section 15 (UPDATING THE FIRMWARE) of the "FULL MANUAL" before starting the update.

• Never turn OFF the transceiver power during the update.

•The firmware will be updated to the following versions.
  Main CPU: 1.12
  DSP Program: 1.06
  DSP Data: 1.00
  FPGA: 1.11
